

## Robust, Business Grade Network Perimeter Security and Backup Solution Works with Microsoft Server® and Microsoft Windows®

### MICROSOFT WINDOWS® SERVER®

- Windows Server 2000, 2003, 2008.
- All Versions Including Small Business Server.
- Fully Automated Backups of files and settings.
- Full MS Exchange Agent Backup with incremental backup of individual mailboxes.
- Full File Encryption protects your data.
- Run as a service or application or both.
- Best in class for backup of open and files in use.
- Spam detection works with Exchange - spam is removed before arrival at Exchange server.
- Works with SMTP delivery, replaces expensive remote Solutions.

### LOCAL BACKUP

- USB External Drive
- NAS
- Redundant PC
- Server

### INTERNET

- Full Firewall Protection
- Is a transparent gateway on your network
- Configures as a network bridge

### LOCAL MS WINDOWS PC OR LAPTOP

- Virus, malware, spyware and spam scanned before arrival at client PC.
- Works with your existing Security Software.
- Content filtering and web-filtering, parental controls, stops phishing and blocks pharming sites.
- Block P-2-P network use, block video downloads to preserve network performance.
- Full logging of un-suitable websites visited.
- No additional security software or settings installed on client.
- Automated Backup of files, email, settings and shortcuts with no user intervention required - runs as a service in the background.

### REMOTE BACKUP

- Fully encrypted
- Multiple European Servers for full redundancy

### REMOTE USERS, MOBILE DEVICES

- VPN Server Functionality or VPN pass-through.
- Automated Backup to either remote backup server, LAN server, local backup or any combination.
- Full protection as if located on the main office LAN.
- Any connected Handheld Device is protected.
